

CHEAT SHEET

Adding Minerals

Add minerals every time you add water. Minerals and other accessories can be ordered at <http://bit.ly/buytowergarden>

Setting Your Timer

* Set timer to run continuously during these times and run on timer the rest of the day/night

Maintenance - Weekly

	Week 1	Week 2	Week 3	Week 4
Check water				
Check pH (5.5 - 6.5)				
Wipe Tower				
Remove dead leaves				
Trim roots in reservoir*				

* only needs to be performed weekly when you're growing large plants like squash, tomatoes etc.

Maintenance - Monthly

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Clean Filter												
Empty Reservoir												

We recommend checking your Tower Garden® daily for pests. Use a dry erase marker on this cheat sheet to keep track of maintenance.

CHEAT SHEET

How Many Seeds Should I Use?

Lettuce	1-2 seeds
Mesclun/Spring Mix	6-8 seeds
Herbs	6+ seeds
Chives	20+ seeds
Kale/Chard	1-2 seeds
Spinach	3-5 seeds
Beans	1-2 seeds
Celery	1 seed
Cucumber	1-2 seeds
Melon (all varieties)	1-2 seeds
Peas	1-2 seeds
Squash (all varieties)	1 seed
Tomato	1 seed

Where Can I Purchase Good Quality Seeds?

Johnny's Seeds - www.johnnyseeds.com
Seeds of Change - www.seedsofchange.com
Burpee Seeds - www.burpee.com
Park Seeds - www.parkseed.com

We recommend avoiding the big box stores when purchasing seeds. They are often stored in conditions that lower germination rates.

Remember, seedlings can be purchased at www.livingtowerseedlings.com

What Can I Grow and When in Florida?

Fall/Winter Only

Spinach
Strawberries
Cabbage

Year Round

Lettuce *
Greens (Kale, Chard, Arugula)
Herbs (except Basil)
Peas **

Summer/Frost Free

Beans
Cucumbers
Squash
Tomato
Melons
Basil

* For best results, use a "heat resistant" variety during the summer when growing lettuce.

** Prefers cooler weather.

Pollination Tip

Plant flowers in or near the Tower Garden to attract pollinators. You'll need to hand pollinate fruiting crops grown inside a screen.

Growing Tip

Whilst leafy greens will grow with just 5 hours of sunlight, fruiting plants need 8 hours or more. The more sun, the better yield!
